ImplementSVM/Decisiontreeclassificationtechniques

AIM:

ToImplementSVM/DecisiontreeclassificationtechniquesusingR.

PROCEDURE:

- Collect and load the dataset from sources like CSV files or databases.
- Cleanandpreprocessthedata,includinghandlingmissingvaluesandencoding categorical variables.
- Split the dataset into training and testing sets to evaluate model performance.
- Normalize or standardize the features, especially for SVM, to ensure consistent scaling.
- Choosetheappropriate model: SVM formargin-based classification, Decision Tree for rule-based classification.
- Trainthemodelonthetrainingdatausingthe'fit' method.
- Make predictions on the testing data using the 'predict' method.
- Evaluate the model using metrics like accuracy, confusion matrix, precision, and recall.
- Visualizetheresultswithplots, suchasdecisionboundaries for SVM ortreestructures for Decision Trees.
- Fine-tune the model by adjusting hyperparameters like `C` for SVM or

CODE:

SVM.R:

```
#Installandloadthee1071package(ifnotalreadyinstalled)
install.packages("e1071")
library(e1071)
#Loadtheirisdataset
data(iris)
#Inspectthefirstfewrowsofthedataset head(iris)
#Splitthedataintotraining(70%)andtesting(30%)sets set.seed(123)
# For reproducibility
sample_indices<-sample(1:nrow(iris),0.7*nrow(iris)) train_data
<- iris[sample_indices, ]
test_data <- iris[-sample_indices, ]
```

[`]max_depth` for Decision Trees.

```
# Fit the SVM model
svm_model<-svm(Species~.,data=train_data,kernel="radial") #</pre>
Print the summary of the model
summary(svm model)
# Predict the test set
predictions<-predict(svm_model,newdata=test_data) #</pre>
Evaluate the model's performance
confusion_matrix<-table(Predicted=predictions,Actual=test_data$Species)
print(confusion matrix)
# Calculate accuracy
accuracy<-sum(diag(confusion matrix))/sum(confusion matrix)
cat("Accuracy:", accuracy * 100, "%\n")
Decision Tree.R:
#Installandloadtherpartpackage(ifnotalreadyinstalled)
install.packages("rpart")
library(rpart)
#Loadtheirisdataset
data(iris)
#Splitthedataintotraining(70%) and testing(30%) sets set.seed(123)
# For reproducibility
sample_indices<-sample(1:nrow(iris),0.7*nrow(iris)) train_data
<- iris[sample_indices, ]
test_data<-iris[-sample_indices,] #
Fit the Decision Tree model
tree_model<-rpart(Species~.,data=train_data,method="class") #
Print the summary of the model
summary(tree model)
# Plot the Decision Tree
plot(tree_model)
text(tree_model,pretty=0) #
Predict the test set
predictions<-predict(tree_model,newdata=test_data,type="class") #</pre>
Evaluate the model's performance
confusion matrix<-table(Predicted=predictions,Actual=test data$Species)
print(confusion matrix)
```

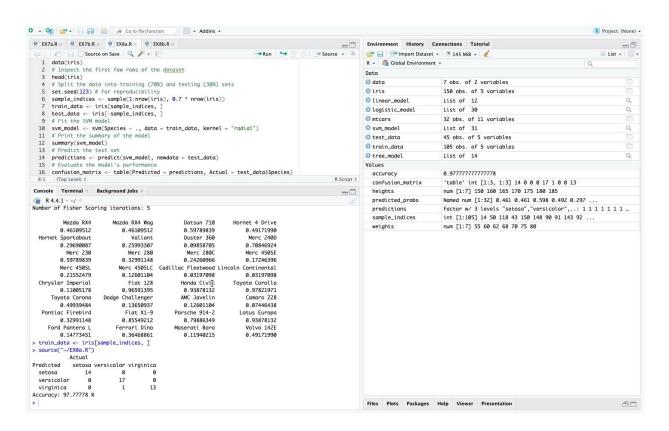

accuracy<-sum(diag(confusion matrix))/sum(confusion matrix)

Calculate accuracy

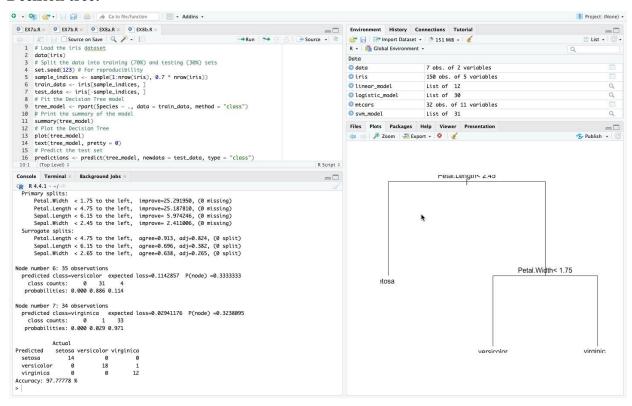

cat("Accuracy:", accuracy * 100, "%\n")

OUTPUT:

SVM in R:

Decision tree:

RESULT:

Thus, Implement SVM and Decision tree classification techniques has been successfully executed.
